

AZURE VIRTUAL DESKTOP

Your secure remote desktop

Azure Virtual Desktop, formerly known as Windows Virtual Desktop, gives remote employees the tools they need to do their jobs by securely delivering Windows 10 or Windows 11 virtual desktops and applications to any device (Windows, Mac, iOS, or Android).

- A familiar Windows environment
- Seamless integration with Office apps
- Built-in intelligent security
- Simplified deployment directly from the Azure portal
- A multi-session Windows experience

Enable secure remote work

Azure Virtual Desktop helps protect your business and data, while giving employees secure access to consistent working environments over a wide variety of devices. It's fast and simple to set up and includes a wide variety of security controls.

Manage work environments cost-effectively

With just a few clicks, you can provide and manage custom desktop environments that run in the cloud. That means you can eliminate the hardware costs of purchasing individual laptops and the labor costs associated with customizing them.

A great user experience

Azure Virtual Desktop gives people the same experience they get on a local device. Your users have the same Windows experience, the same Microsoft Office experience—and even the same Microsoft Teams experience.

It's easy to get started and if you're using Microsoft 365 Business Premium, you already have the licenses you need.
