

M365 Security Audit

Microsoft 365 is at the core of many organizations operations, providing essential tools for productivity and collaboration. However, ensuring the security of your data requires special attention. Our Microsoft 365 security audit is designed to identify vulnerabilities, optimize configurations, and strengthen the protection of your cloud environment.

What Our Security Audit Includes

- **Comprehensive Security Settings Review**
Verification of account configurations, user access controls, and identity management.
- **Risk Assessment**
Identification of potential vulnerabilities, unauthorized access, threat evaluation, and risky practices in the use of Microsoft 365 services.
- **Collaboration Tools Security Check**
Analysis of Teams, Exchange Online, SharePoint, and OneDrive security, including document sharing and permission management.
- **Detailed Report & Recommendations**
A clear report with a personalized action plan to address identified weaknesses and enhance your organization's security posture.
